Aragon

Democratizing Governance

We believe ***decentralized organizations can solve the world's worst problems***
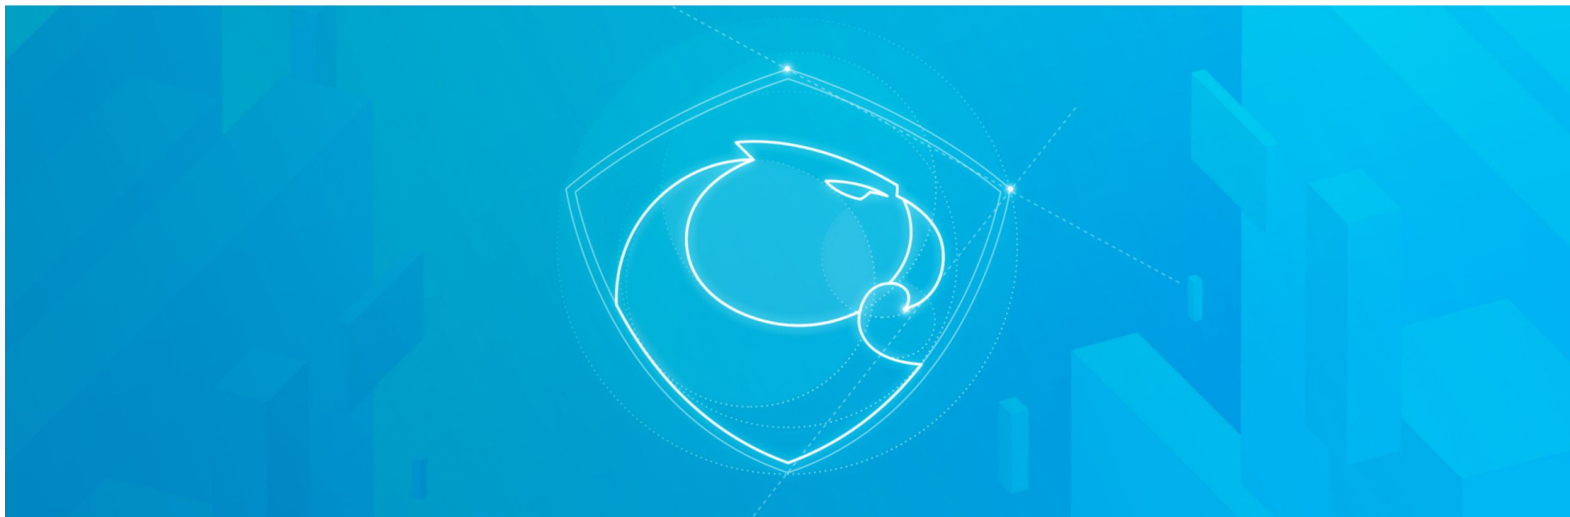

Aragon is a project that aims to disintermediate the creation and maintenance of organizational structures by using blockchain technology. We want to empower people across the world to easily and securely manage their organizations. We provide the tools for anyone to become an entrepreneur and run their own organization, to take control of their own lives

By making it possible for everyone in the world to organize, we are enabling a borderless, permissionless and more efficient creation of value

Aragon Core

Aragon Core v0.5—"The Architect" release

The most powerful Aragon release to date

Aragon Core

- Decision-making by voting
  - Votes are a **secure**, **transparent** and **unforgeable** way to **come to a decision** on major issues

- Tokens represent your stake in the organization
  - Your organization is in control of its funds

- Tamper-proof, effective accounting
  - Unprecedented level of **transparency** can be gained through the use of a public blockchain

- Fine-grained permissions
  - Permissions are **granular** and assigned in fine detail

Aragon Core

- Powered by **aragonOS**
  - Aragon organizations are powered by AragonOS and **fully customizable** to fit your needs

- Code is **open source**
  - As a developer you can modify it to match your specific use case

Aragon Network

A digital jurisdiction

Aragon Network will be the first **community governed** decentralized organization whose goal is to act as a **digital jurisdiction,** an online decentralized court system that isn't bound by traditional artificial barriers such as national jurisdictions or the borders of a single country

Aragon Network

A digital jurisdiction

We describe a network of **decentralized autonomous organizations** (DAOs) which collectively serve as a digital jurisdiction called the Aragon Network (AN). The network provides a layer of abstraction for **applications and organizations operating on Ethereum** that is equipped to **resolve subjective disputes** without undermining the immutability guarantees of the blockchain. Users of the network can create **human readable agreements** that are enforced by a **decentralized court**.

aragonOS

The smart contract framework for DApps and protocols

Upgradeability, access control and governance. All taken care of

aragonOS is a **smart contract development framework** with a **very strong focus** on **governance** and **upgradeability**

The architecture of aragonOS can be used by **any complex DApp or protocol.** It enables extendability with the capability to plug in any aragonOS compatible app or module

Using aragonOS is **independent of any tokens** and **will always be free**
